

REMARKS

Claims 1 to 12 are pending in this case. New claims 11 and 12 have been added. Claims 1, 2, and 7 have been amended to advance the prosecution of the subject application. Support for the claim amendments can be found in the original specification, such as from page 10, line 29 to page 11, line 6. Applicants hereby respectfully request that the subject application be reconsidered in view of the above claim amendments and the following remarks.

Claim 1-10 were rejected under 35 U.S.C. § 103(a) as being unpatentable over *Leapman et al.* (US Patent Application Publication No. 2003/0198008) in view of *Lee et al.* (US Patent No. 5,355,279). This rejection is respectfully traversed.

The invention relates to a wireless interactive device of personal computer having a display and a base. Independent claim 1 recites that “when the display is separated from the base, the switch circuit on the main board sends an LVDS signal output from the graphic display chip directly to the LCD screen for imaging.” Independent claim 7 recites similar claim features. According to the claimed invention, the graphic display chip on the main board outputs an LVDS (low voltage differential signal) to the LCD screen, when the display is separated from the base. Thus, the LCD screen receives LVDS signals, even when the display is separated from the base.

The cited portions of *Leapman* do not disclose the above claim features in independent claims 1 and 7. Therefore, independent claims 1 and 7 each patentably distinguish over the cited art. Accordingly, the subject rejection of claims 1 to 10 is believed to have been overcome.

Each of the pending claims 1 to 12 in this case is believed to be in immediate condition for allowance and such action is earnestly solicited.

Respectfully submitted,

Dated: January 22, 2008
